## Information on new dropper inserts for oral drops

Dear patients and prescribers,

We would like to inform you that our mistletoe drops for oral use (*Viscum album praeparatum*) have recently been equipped with a new dropper insert. The change affects the following products:

Product	Code
<i>Viscum Mali praeparatum</i> 3 %	6513031
<i>Viscum Pini praeparatum</i> 0.1 %	6526559
<i>Viscum Pini praeparatum</i> 3 %	6513054
<i>Viscum Quercus praeparatum</i> 0.1 %	6526542
<i>Viscum Quercus praeparatum</i> 3 %	6513048

We continuously strive to optimize the use of our preparations. Due to frequent complaints regarding clogged dropper tips or inadequate dispensing of the aqueous solutions in the past, we have switched to a different dropper after careful testing. Although the bottle is slightly higher, the amount of liquid contained in each bottle remains 20 ml and the standard drop volume is unchanged (1 ml = approx. 15 drops; approx. 300 drops per bottle, as has always been specified on each package).

Please note that due to the improved, quicker and more uniform dispensing of the solution, the total number of drops dispensed may vary compared to the old dropper while the amount of liquid contained in each bottle remains the same. If you notice your bottle emptying faster, we recommend that you have your standing dosage prescription checked by your treating specialist and adjusted if necessary.

We hope that the improved dropper insert will make our products easier, safer and more convenient to use. Our Infoline for medical professionals will be happy to provide you with medical advice if you have any questions about our products and their use.

Kind regards

Iscador AG
