

Availability Information

SWITZERLAND: Discontinuation of 0.0001 mg and 0.001 mg strengths

Due to lack of demand, the Iscador product range in Switzerland had to be adjusted as follows:

The lowest available strength is 0,01 mg for all Iscador products. This dosage is also available as single strength packs.

Due to the established product safety and tolerability, a change in prescription from the lower dosages (0,0001 mg or 0,001 mg) to 0,01 mg is possible.

Discontinued Products		Recommended Replacement
